

PuppyBoost

Energy booster for dogs and cats

INSIGHTS

- Urgent requirements in energy (birth, diarrhea, recovery)
- Support of the weak newborns (big litter, long duration whelping)
- Temporary weakness, feeling of fatigue after an intensive activity, a stress (light hypoglycemia)

WHEN DO I NEED PUPPYBOOST ?

- On newborn, to support weak newborns or in case of long duration whelping
- After a diarrhea (feeding enterocytes)
- Start of refeeding
- During recovery after intensive activity

Usable from the early age

COMPOSITION

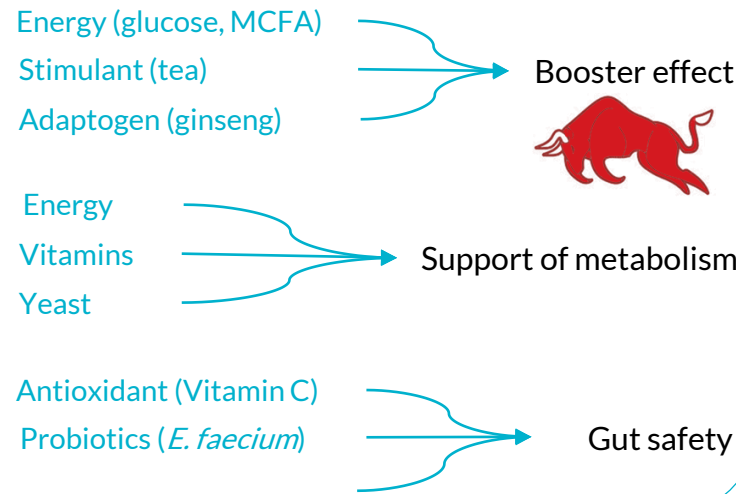

- Medium chain fatty acids (MCFA), glucose syrup, hydrolysate of yeast, vitamins, tea extract, siberian ginseng, lactic acid bacteria (*E. faecium*)

PACKAGING

- 10 ml syringe in carton box of 35
- 15 ml syringe in display box of 12 syringes individually packed

HOW PUPPYBOOST WORKS ?

HOW TO USE PUPPYBOOST ?

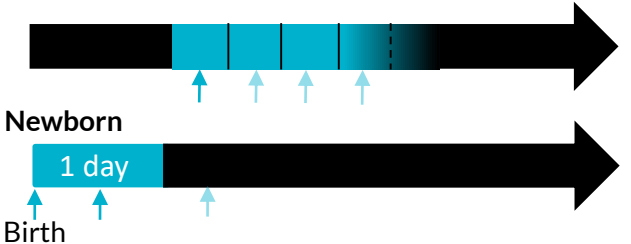

Dose:

- Newborn: 1ml
- <10 kg : 2ml
- 11-25kg : 5ml
- 26-40 kg : 8ml
- >40kg : 12ml

Energy booster

Give a second day within the day if needed

WHAT CAN I EXPECT ?

Dogs

- An easier start for newborns
- An easier recovery of gut (feeds enterocytes) after diarrhea
- A booster effect (anti-fatigue properties)

Vets

- Effective product
- Complements therapeutic arsenal, especially for newborn care
- Especially suitable for recovery periods

Dog owners

- Improves survival rates of newborn puppies and kittens
- Improves recovery after diarrhea or fasting
- Galvanizes pets in recovery phase after disease or intensive effort

INVESTMENT

- By 15 ml syringe, feed supplement for:
 - 5 newborns
 - 7 days for a dog weighing less than 10 kg
 - 3 days for a dog weighing between 11 and 25 kg
 - 2 days for a dog weighing between 26 and 40 kg
 - 1 day for a dog weighing more than 40 kg
